

# MUBASHIR NAEEM JANJUA

mubashirnaeemj@gmail.com · Karachi, Pakistan · +92 330 381 8395 · LinkedIn

## PROFESSIONAL SUMMARY

AI Automation Engineer with 1+ year of production experience designing and deploying enterprise-grade AI workflows that eliminate manual processes and drive measurable business outcomes. Proven ability to architect end-to-end automation systems — from LLM-powered outreach pipelines to real-time AI voice agents — integrating REST APIs, CRM platforms (Salesforce), and generative AI at scale. Operates across the full stack: backend systems (FastAPI, PostgreSQL), workflow automation (n8n, Zapier), and AI APIs (OpenAI, ElevenLabs, Deepgram). Builds automation that runs in production, not just demos.

## PROFESSIONAL EXPERIENCE

### AI Automation Developer — Axioware

Jan 2026 – Present

- Engineered an AI automation workflow using n8n and 10+ REST APIs (Google Places, OpenAI GPT-4o, Twilio, Salesforce) to autonomously enrich leads and generate AI-powered cold call scripts — processing 100–200 leads per engagement with zero manual effort, a task that would have taken days to complete manually.
- Architected a production-grade AI calling platform (FastAPI + PostgreSQL + Celery) with ElevenLabs voice agents, replacing manual outbound calling by autonomously executing up to 500 calls/day, logging post-call LLM analysis via Deepgram directly into Salesforce Chatter and Google Sheets, and surfacing real-time KPIs on a live analytics dashboard.
- Built a real-time AI agent (Electron desktop app) that captured live dual audio streams, transcribed speech via Deepgram, and delivered LLM-generated next-dialogue suggestions in real-time — enabling sales agents to close leads more effectively through instant Salesforce CRM context surfaced by phone number lookup.
- Developed a generative AI video automation pipeline using Zapier, OpusClip, and ChatGPT that processed raw footage into platform-ready clips in ~5 minutes per video and auto-distributed content across Instagram, Facebook, and YouTube — validated across 50+ videos during testing.

## EDUCATION

SMIU, Karachi — BS Artificial Intelligence (CGPA: 3.05)

Sep 2022 – Jan 2026

Government Islamia Degree College, Karachi — FSC in Computer Science

Sep 2019 – Aug 2021

## KEY PROJECTS

### AI-Powered Calling Platform + Call Rubrix

Feb 2026 – Jun 2026

Deployed an autonomous outbound calling system that replaced manual sales dialling — executing up to 500 AI-driven calls/day via ElevenLabs voice agents, with Celery-scheduled retry logic, post-call LLM analysis, and automatic sync into Salesforce Chatter and Google Sheets.

FastAPI · PostgreSQL · Celery · Railway · ElevenLabs · Deepgram · Salesforce API · Google Sheets API · OpenAI · Python

### Real-Time AI Calling Assistant (Electron Desktop App)

Mar 2026

Windows desktop app capturing live dual-channel audio, transcribing via Deepgram in real-time, and surfacing LLM-generated dialogue suggestions with Salesforce lead context pulled by phone number lookup — enabling sales agents to close leads more effectively on live calls.

Electron · Node.js · Deepgram API · OpenAI · Salesforce CRM API

### Real-Time Sign Language to English Translation System

2024

Computer vision system translating live sign language gestures into English text using ML/DL classifiers with real-time webcam feed processing via MediaPipe pose estimation.

Python · OpenCV · MediaPipe · TensorFlow · NumPy

## SKILLS

### AI & Automation:

n8n · Zapier · Celery · OpenAI GPT-4o · ElevenLabs Voice Agents · Deepgram STT · Prompt Engineering · Generative AI · LLM Integration · AI Agent Development

### Backend & Integration:

FastAPI · Python · PostgreSQL · SQLite · REST APIs · Webhooks · Salesforce API · Google Sheets API · Pandas

### Frontend & Delivery:

Electron · Next.js · Tailwind CSS · Lovable · Power BI

### Cloud & Infrastructure:

Railway (production deployment) · AWS (in progress)

## CERTIFICATIONS & LEADERSHIP

Google Data Analytics Professional Certificate — Coursera, Feb 2025

AI Student Club (AISC) — Lead Member, Nov 2024 – Feb 2025

Organised technical workshops (Python, SQL, ML) for 20+ students; led 5-person team building the sign language CV system — owned task allocation, drove model training pipeline, and delivered faculty presentation.
